

7 Reasons why the COVID vaccines and vaccine mandates should not be approved

1. **The vaccines kill more people than they save.** Although the vaccines reduce the number of COVID deaths, that benefit comes at a steep price: death from other causes. [Pfizer's own Phase 3 study \(6 month\)](#) showed that more people died who got the vaccine than who got the placebo. Today, there is no risk-benefit analysis showing that the vaccines have saved more lives than they've taken. The VAERS data shows that the vaccines are extremely unsafe and for those under 50 years old will kill more people than they save. The vaccines elevate dozens of serious adverse cardiovascular and neurological events, reactivate latent viruses, and can make cancers worse. Healthy young people have died shortly and unexpectedly after vaccination.
2. **Multiple studies show that the vaccines have killed 150,000 Americans so far.** More than 10 different analyses show that approximately 150,000 Americans have been killed by the vaccines. These analyses have not been disproven despite a \$1M reward for any scientist who does so.
3. **There are safer, more effective options available.** Early treatments are faster, safer, cheaper, and more effective (over 99% for all variants). Virtually no one hospitalized for COVID today was treated with a proven early treatment protocol. Unlike the vaccine, nobody dies from these treatments.
4. **The required safety testing still has not been done.** The proper testing still hasn't been done. We don't know if the vaccine will make people more susceptible to COVID infections through antibody dependent enhancement (ADE) and/or linked-epitope suppression ("original antigenic sin"). No study to date has covered the span of a single human gestation cycle. We know the spike protein is associated with Lewy bodies which are associated with prion diseases like dementia.
5. **No open forum to resolve the concerns of qualified scientists who have safety concerns.** The CDC and FDA refuse to engage in discussions with top scientists, such as Robert Malone, inventor of the mRNA vaccine, to discuss the fatality and VAERS analysis in a public forum. The CDC and FDA refuse to see the evidence that is contrary to the "safe and effective narrative."
6. **No autopsies.** There have been no autopsies of anyone dying after getting the COVID vaccine. This is troubling since one of the world's top pathologists did such a study on 40 patients who died within 2 weeks after vaccination and found that at least 30% to 40% were killed by the vaccine. Despite the availability of robots that perform autopsies that include blood analysis, either none have been performed, or else they have been withheld from the public.
7. **Clinical trial fraud.** There was clear fraud in the Phase 3 Pfizer trial where at least one participant, 12-year old Maddie de Garay, was paralyzed less than 24 hours after

receiving the vaccine. The FDA promised to investigate and did nothing. Today, Maddie cannot feel below her waist, cannot walk unassisted, cannot hold her head up, and must eat through a feeding tube. There were only 1,131 children in the treatment arm. One child in 1,131 being paralyzed is unacceptable to mitigate a potential risk that is close to zero.

For supporting data for all the points above, [see this 250 page document](#).

VAERS data

Note: The Vaccine Adverse Event Reporting System (VAERS) is under-reported. Multiply VAERS counts by 30 to get the estimated number of actual events.

Search Results

From the 8/13/2021 release of VAERS data:
<https://medalerts.org/vaersdb/findfield.php>
Found 595,622 cases where Vaccine is COVID19

Table

↓	↑ ↓	
Event Outcome	Count	Percent
Death	13,068	2.19%
Permanent Disability	17,228	2.89%
Office Visit	98,760	16.58%
Emergency Room	57	0.01%
Emergency Doctor/Room	72,643	12.2%
Hospitalized	53,979	9.06%
Hospitalized, Prolonged	163	0.03%
Recovered	197,913	33.23%
Birth Defect	376	0.06%
Life Threatening	13,811	2.32%
Not Serious	242,634	40.74%
TOTAL	† 710,632	† 119.31%

† Because some cases have multiple vaccinations and symptoms, a single case can account for multiple entries in this table. This is the reason why the Total Count is greater than 595622 (the number of cases found), and the Total Percentage is greater than 100.

Comments

It's incredibly depressing to know that what was once the worlds most-respected medicines regulator is going full-on corrupt. They not only do not have anything enough duration after dosing to have a clue what's going to happen, but the product has picked up enough baggage to

warrant being pulled from the market, permanently. Anyone remember how the FDA handled thalidomide? Now look. I despise them.

Dr Mike Yeadon

“It is already concerning that full approval is being based on 6 months’ worth of data despite the clinical trials designed for two years,” she said. “There is no control group after Pfizer offered the product to placebo participants before the trials were completed.

“Full approval of covid-19 vaccines must be done in an open public forum for all to see. It could set a precedent of lowered standards for future vaccine approvals.

[Covid-19: FDA set to grant full approval to Pfizer vaccine without public discussion of data](#)

Unfortunately, it looks like full licensure of the Pfizer vaccine could be just around the corner. This breaks promises the FDA made, including accelerating the time to considering approval. So much data and associated concerns have accumulated in the past eight months, including recently learning that duration of immunity (DOI) is only ~4.5-6 months, which necessitates rapid boosting, which exacerbates safety issues (especially if damage is cumulative). And yet the FDA claims they have no questions beyond what they had in Dec. 2020. Narrowly focused immunity, ridiculously short DOI, largely ineffective against the delta variant, and the dangers associated with it have been underestimated by an unknown but substantial degree and there remain many questions about potential long-term harms. Unbelievable. Buckle your seatbelts. This is a runaway train that needs to be stopped immediately.

**Dr. Byram W. Bridle,
Associate Professor of Viral Immunology,
University of Guelph, Ontario, Canada**

"To date, approximately 52% of the total US population have received 2 doses of COVID-19 injectable products. As of August 20th, 2021, 450,602 AEs have been reported in the VAERS system. These numbers are off the scales with regards to numbers associated with vaccine roll outs when compared to previous years. Even more atypical, are the numbers of deaths reported in the context of the COVID-19 products. The figure shown here shows the total VAERS reports from data and total VAERS-reported death counts per year for the past 10 years up to and

including the VAERS update on August 20th, 2021. Both the absolute numbers of total AEs and those of deaths per year dramatically outnumber the absolute numbers recorded in previous years. To date, there are 7018 (1.6% of all AEs) deaths in the VAERS database. The precautionary principle dictates the immediate investigation of these products prior to further administration, especially into demographics in the exclusion criteria lists of the Phase III trials."
